1. Aim/Overview of the practical:

a) Creating a Private Docker Image Repository.

2. Code for practical: (a)

A private Docker image repository is a Docker registry that is only accessible to authorized users. Private Docker image repositories can be hosted on-premises or in the cloud. There are many benefits to using a private Docker image repository, including:

- Security
- Compliance
- Performance

Step 1: Pull the Registry Image from Dockerhub.

```
PS C:\Users\Pinda> docker pull registry
Using default tag: latest
latest: Pulling from library/registry
96526aa774ef: Already exists
834bccaa730c: Pull complete
87a69098c0a9: Pull complete
afc17120a9f7: Pull complete

Digest: sha256:8a60daaa55ab0df4607c4d8625b96b97b06fd2e6ca8528275472963c4ae8afa0
Status: Downloaded newer image for registry:latest
docker.io/library/registry:latest
```

Step 2: Run local registry in detached mode.

```
PS C:\Users\Pinda> docker run -d -p 5000:5000 --restart always --name registry registry:2 Unable to find image 'registry:2' locally
2: Pulling from library/registry
Digest: sha256:8a60daaa55ab0df4607c4d8625b96b97b06fd2e6ca8528275472963c4ae8afa0
Status: Downloaded newer image for registry:2
47847ce90f1548068b7a60afb3dd60c9043380a5103addb63fa7e75df27a6dc8
```

Step 3: Now, use it from within Docker:

\$ docker pull nginx.

Step 4: Set tag to ready for push.

\$ docker tag nginx localhost:5000/nginx1

PS C:\Users\Pinda> docker tag nginx localhost:5000/nginx1

Step 5: Pushing image to Private Docker Image Repository.

\$ docker push localhost:5000/nginx1

```
PS C:\Users\Pinda> docker push localhost:5000/nginx1
Using default tag: latest
The push refers to repository [localhost:5000/nginx1]

: 1778
```

Step 6: Check image is pushed or not in private repository.

curl http://localhost:5000/v2/ catalog

```
PS C:\Users\Pinda> curl http://localhost:5000/v2/_catalog
